

Santiago A. Ruiz Diaz

OT/ICS Systems Engineer | Building Automation & Controls | Security+ · CySA+ · PenTest+ | 15+ Years Critical Infrastructure

s.abelrd@gmail.com | United States | English / Spanish (Bilingual) | [linkedin.com/in/santiago-a-ruiz-diaz-4aa418b2](https://www.linkedin.com/in/santiago-a-ruiz-diaz-4aa418b2) | github.com/Santi4g0RD

SUMMARY

OT/ICS professional with 15+ years of hands-on building automation experience — SCADA-like controllers, PLC (GCL+), BACnet, BMS — maintaining and troubleshooting critical infrastructure across a live, network-connected campus. Paired with a security engineering skill set (vulnerability management, threat hunting, EDR) as Security Engineer I at LOGN Pacific. Bilingual English/Spanish.

TECHNICAL SKILLS

OT/ICS: SCADA · PLC Programming & Troubleshooting · GCL+ · BACnet · BMS · HVAC & Electrical Infrastructure · IEC 62443 · NIST 800-82 · IT/OT Convergence · Network Segmentation · Purdue Model

SIEM/Detection: Microsoft Sentinel · Microsoft Defender for Endpoint (EDR) · Microsoft 365 Defender · KQL · Threat Hunting · Log Analysis · Alert Triage · MITRE ATT&CK

Vulnerability Management: Tenable / Nessus · DISA STIG · CVSS · NIST CSF · NIST 800-53 · System Hardening

Scripting: PowerShell · Bash · Python

Cloud: Microsoft Azure · Azure Security Center

Other: Incident Response · Access Control · Privileged Access Management · Zero Trust · Change Management

CERTIFICATIONS

CompTIA Security+ (ce) · CySA+ (ce) · PenTest+ · Network+ (ce) · A+ (ce) · CSIS · CIOS · Linux Essentials (LPI) · ITIL Foundation

EXPERIENCE

HVAC & Building Automation Systems Specialist | OT/ICS Operations · County College of Morris · Nov 2010 – Present

- 15+ years as technical owner of OT/ICS environments across a multi-building campus — maintained and troubleshot GCL+ PLC scripts across SCADA-like controllers and BACnet-connected building systems, resolving logic errors across HVAC, boiler, and electrical infrastructure.
- Monitored system integrity across 15+ networked buildings, identified anomalous behavior, and executed configuration changes via BMS client terminal — minimizing operational downtime and unplanned outages.
- Applied IEC 62443 and NIST 800-82 principles to IT/OT convergence and network segmentation of campus control systems; administered access control via BMS client terminal using least-privilege and PAM principles.

Security Engineer I · LOGN Pacific · March 2026 – Present

- Implemented full vulnerability management lifecycle across ~200-server enterprise (Windows Server 2025 & Linux) using Tenable — authenticated/unauthenticated scans, DISA STIG templates, CVSS-based prioritization; reduced critical exposure surface through NTLMv1, SMB signing, and TLS 1.0/1.1 remediation.
- Conducted post-intrusion threat hunt (Signal After The Noise) in Microsoft Sentinel — authored 20+ KQL queries across 6 MDE tables; mapped full adversary kill chain: T1078 → T1021 → T1547.001 → T1071.001 → T1562.001 → T1036 → T1003.001.
- Detected unauthorized TOR browser usage on corporate Azure endpoint via MDE/EDR and KQL — confirmed full TOR circuit, mapped to T1090.003/T1204/T1036, delivered incident report with device isolation and port-block recommendations.
- Facilitated CAB meetings, drafted VM policy, and drove executive sign-off across stakeholder teams.

EDUCATION

B.S. Cybersecurity & Information Assurance (BSCSIA) — Western Governors University · Mar 2025 – Mar 2026

Master's in Cybersecurity — Enrollment target: July–August 2026
