

Santiago A. Ruiz Diaz

OT/ICS Cybersecurity Analyst | Security+ • CySA+ • PenTest+ | 15+ Yrs Critical Infrastructure

s.abelrd@gmail.com | United States | English / Spanish (Bilingual) | [linkedin.com/in/santiago-a-ruiz-diaz-4aa418b2](https://www.linkedin.com/in/santiago-a-ruiz-diaz-4aa418b2) | github.com/Santi4g0RD

SUMMARY

Cybersecurity professional with 15+ years operating OT/ICS systems — SCADA, PLC (GCL+), BACnet networks — now applying field-level OT expertise in threat detection, vulnerability management, and incident response. Currently working as Security Engineer I at LOGN Pacific delivering Sentinel, Defender for Endpoint, and Tenable projects. Bilingual English/Spanish.

TECHNICAL SKILLS

SIEM/Detection: Microsoft Sentinel • Microsoft Defender for Endpoint • KQL • Threat Hunting • Log Analysis • MITRE ATT&CK **VM:** Tenable/Nessus • DISA STIG • CVSS **Scripting:** PowerShell (Windows server remediation) • Bash (Linux server remediation) • Python **OT/ICS:** SCADA • PLC • GCL+ • BACnet • BMS **Cloud:** Microsoft Azure **Other:** Incident Response • Access Control • System Hardening

CERTIFICATIONS

CompTIA Security+ • CySA+ • PenTest+ • Network+ • A+ • CIOS • CSIS • Linux Essentials (LPI) • ITIL

EXPERIENCE

Security Engineer I (*Internship*) March 2026 – Present

LOGN Pacific

- Implemented full vulnerability management lifecycle across ~200-server enterprise using Tenable — authenticated/unauthenticated scans, DISA STIG templates, CVSS-based prioritization; wrote PowerShell scripts to remediate Windows servers and Bash scripts for Linux servers.
- Conducted post-intrusion threat hunt (*Signal After The Noise*) in Microsoft Sentinel — authored 20+ KQL queries across 6 MDE tables, mapping full adversary kill chain T1078 → T1021 → T1547.001 → T1071.001 → T1562.001 → T1036 → T1003.001.
- Detected unauthorized TOR browser usage on corporate Azure endpoint via MDE and KQL — confirmed full TOR circuit, delivered incident report with isolation and port-block recommendations.
- Decoded Base64-encoded PowerShell C2 payloads using KQL's `base64_decode_tostring()` to expose Cloudflare-fronted C2 infrastructure; produced MITRE ATT&CK-mapped IOC report.

HVAC & Building Automation Systems Specialist | OT/ICS Operations Nov 2010 – Present

County College of Morris

- 15+ years operating OT/ICS environments — maintained and troubleshot GCL+ PLC scripts across SCADA-like controllers and BACnet-connected building systems; escalated unresolvable issues to appropriate teams.
- Administered access control and managed user permissions for building automation systems via BMS client terminal, applying least-privilege principles across HVAC, boilers, and electrical infrastructure.
- Monitored system integrity across networked control systems, identified abnormal behavior, and made configuration changes as needed — minimizing downtime and supporting operational continuity.

EDUCATION

B.S. Cybersecurity & Information Assurance (BSCSIA) — Western Governors University Mar 2025 – Mar 2026

Master's in Cybersecurity (*Pursuing enrollment*) Expected start: mid-2026

Coursework — Electronics & Electrical Engineering Technology — Thomas Edison State University (*not completed*) 2014 – 2017
